## THE CABIN CONSTRUCTION OF THE CONCORDE CREDO

As far as motorhome building is concerned, Concorde stands for perfect insulation and outstanding stability. This is primarily due to the fully bonded Solidtherm® cabin construction with high-density solid PU profiles to eliminate cold spots and the side wall insulation with a 30 millimetre layer of RTM foam. As if that were not enough: sandwich constructions are also used for the floor and intermediate panels, with insulation layers adding up to a total of 60 millimetres, contributing to the excellent insulation values achieved by Concorde. Furthermore, the side skirts, the bumpers and the front and rear sections are made of rugged but flexible GRP material. The completely smooth, high gloss, aluminium sandwich wall panels create an automobile impression and aluminium roof profile sections with rain channels reduce soiling of the side walls to ensure that the attractive appearance is maintained over the years.

Stated prices for vehicles and special equipment apply to vehicles purchased and registered in Germany and are quoted in Euro including 19% German value added tax. Concorde reserves the right to adjust the quoted prices in the event of an increase in value-added tax between order and delivery. All prices are recommended retail prices ex-works. If manufacturers of the basic vehicle change their prices, this will necessitate a corresponding adjustment of the price of the finished vehicle. The prices for optional equipment only apply when the equipment is ordered in time and installed in the factory. Retrospective installation work incurs additional costs for materials and labour. The quoted prices include the ancillary expenses for delivery of the chassis and approval by the German Technical Inspectorate (TÜV). Concorde reserves the right to implement technical modifications as long as the quality of the product remains the same or is improved and the intended purpose is not adversely affected. This price list supersedes all previous price lists.
